

What do you Wonder?

Any living thing can lead us to ask questions,
and questions are the basis of scientific investigation.
Here's a chance for you to be the scientist.

Carefully observe a plant. What does it look like? Which parts can you see?
Write down things you wonder about. You might wonder about...

- Colors of leaves or flowers – are they attractive or camouflaged?
- Shapes of leaves or roots you can see
- Hairs, waxy coatings, or thorns on the plant
- Visitors to the plant – are there insects or birds on the plant?

Next, try to come up with an
explanation for the patterns or
characteristics you observed.

I wonder why _____

Has _____

If it is because _____

And I investigate this explanation by _____

Then, if my explanation is correct, I should see _____
